

IBM x Kerala Government Hackathon 2026

Challenge 8: Kerala Commodity Price Intelligence Platform

Background

Prices of commodities such as fish, coconut, rubber, banana, and vegetables fluctuate frequently due to weather conditions, supply disruptions, transportation challenges, and changing demand.

Farmers, traders, and consumers often have limited access to consolidated market intelligence.

Challenge

Build a platform that helps users understand and monitor commodity prices across Kerala.

Target Users

- Farmers
- Traders
- Cooperatives
- Consumers

Suggested Features

- Market price dashboard
- Historical trends
- District-wise comparison
- Price alerts
- Market insights

Example Scenario

A rubber farmer wants to understand how prices have moved across Kerala over the last three months before deciding when to sell.

Impact

Enable informed market decisions and improve supply chain transparency.
